Vue生命周期

这是Vue文档里关于实例生命周期的解释图

那么下面我们来进行测试一下

```
<section id="app-8">
    {{data}}
</section>
```

```
var myVue=new Vue({
        el:"#app-8",
        data:{
            data: "aaaaa",
            info: "nono"
        },
        beforeCreate:function(){
            console.log("创建前======")
            console.log(this.data)
            console.log(this.$el)
        },
        created:function(){
            console.log("已创建======")
            console.log(this.info)
            console.log(this.$el)
        },
        beforeMount:function(){
            console.log("mount之前======")
            console.log(this.info)
            console.log(this.$el)
        },
        mounted:function(){
            console.log("mounted======")
            console.log(this.info)
            console.log(this.$el)
        },
        beforeUpdate:function(){
            console.log("更新前======");
```

```
},
updated:function(){
    console.log("更新完成======");
},
beforeDestroy:function(){
    console.log("销毁前======")
    console.log(this.info)
    console.log(this.$el)
},
destroyed:function(){
    console.log("已销毁======")
    console.log(this.info)
    console.log(this.info)
    console.log(this.$el)
}
```

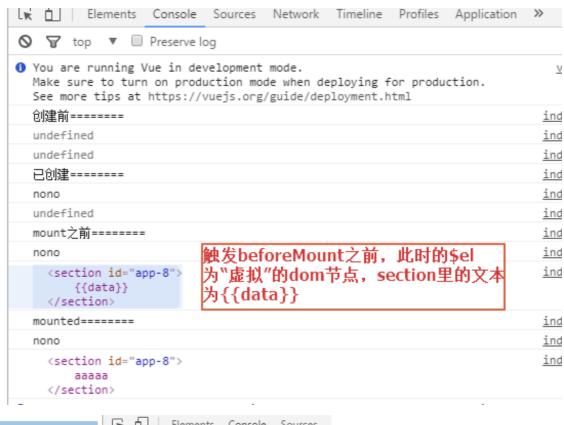

代码如上,浏览器开始加载文件

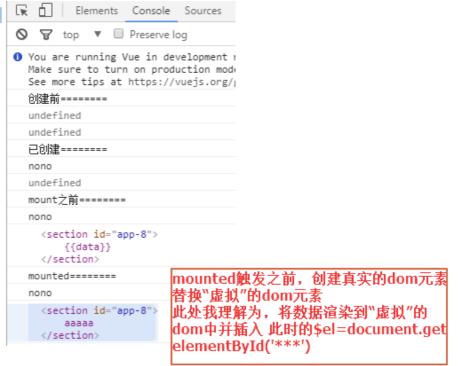

aaaaa

```
LR 🛄 | Elements Console Sources Network Timeline Profiles Application //
You are running Vue in development mode.
                                                                        vue.js:6109
  Make sure to turn on production mode when deploying for production.
  See more tips at https://vuejs.org/guide/deployment.html
  创建前======
                                                                       index.html:60
 undefined
                                                                       index.html:61
  undefined
                                                                       index.html:62
 已创建=====
                                                                       index.html:65
 nono
                                                                       index.html:66
 undefined
                                                                       index.html:67
 mount之前======
                                                                       index.html:70
                                                                       index.html:71
   <section id="app-8">
                                                                       index.html:72
       {{data}}
   </section>
  mounted=====
                                                                       index.html:75
                                                                       index.html:76
                                                                       index.html:77
   <section id="app-8">
1 Download the Vue Devtools extension for a better development experience:
                                                                        vue.js:6126
  https://github.com/vuejs/vue-devtools
```

bbbbbb

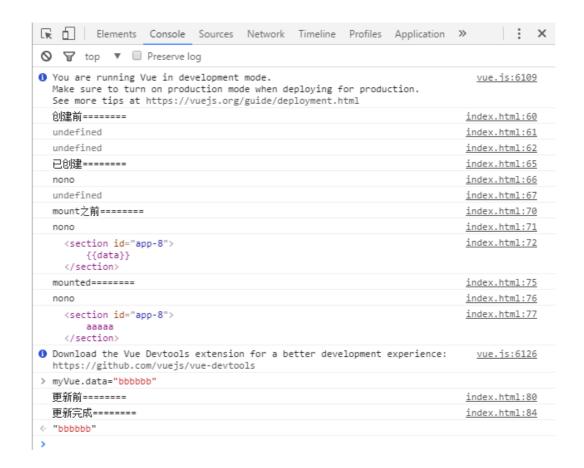

由上图可知:

- 1、beforeCreate 此时\$el、data 的值都为undefined
- 2、创建之后,此时可以拿到data的值,但是\$el依旧为undefined
- 3、mount之前,\$el的值为"虚拟"的元素节点
- 4、mount之后, mounted之前, "虚拟"的dom节点被真实的dom节点替换,并将

其插入到dom树中,于是在触发mounted时,可以获取到\$el为真实的dom元素() myVue.\$el===document.getElementById("app-8") // true

接着,在console中修改data,更新视图

bbbbbb

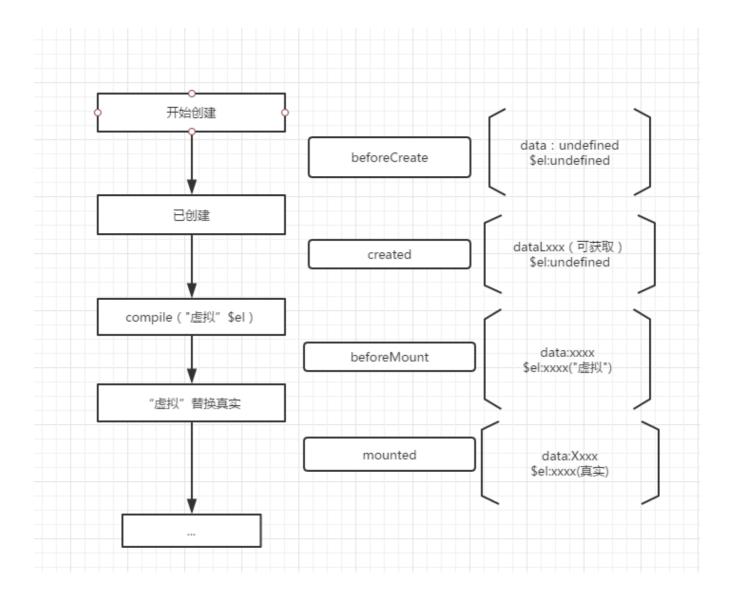

触发beforeUpdata 和updated

接着, 执行myVue.\$destroy()

aaaaa

文章中若有错误请指出,转载请注明出处,谢谢~

所以图中每个阶段都有一个描述,一般就是在mounted阶段做ajax,或者配合路由钩子做一些事情。

created阶段做一些初始化,实现函数自执行

beforeDestory阶段做confirm

进行加载、摧毁前询问时等场景使用。

beforeCreate 给个loading界面 created撤销loading

beforeDestory 你确认删除XX吗? destoryed当前组件已被删除,清空相关内容
